SENIOR SOFTWARE ARCHITECT | 20+ YEARS | APPLIED AI & ENTERPRISE SYSTEMS

Senior Software Architect with 20+ years building enterprise and distributed systems. Leads production AI systems end to end: Claude-powered document extraction, AI-driven browser automation, and integration and reliability work on LLM platforms.

SKILLS

AI & Automation: Anthropic Claude API | OpenAI API | Model Context Protocol (MCP) | LLM Document Extraction | Prompt Engineering | Ollama (local LLMs) | Playwright | n8n | AI-Assisted Development (Claude Code, Cursor, GitHub Copilot)
Languages: TypeScript | JavaScript | Python | Java | Ruby | SQL
Frameworks: Node.js | React | Next.js | React Native | Expo | SvelteKit | Angular | Electron | Tailwind CSS | Spring | Hibernate
Cloud & DevOps: Microsoft Azure (Logic Apps, Functions, Azure DevOps) | Amazon Web Services (AWS Lambda) | Terraform | Docker | GitHub Actions | CI/CD | Sentry
Data & Analytics: PostgreSQL | MySQL | SQL Server | A/B Testing | Statistical Analysis | Reporting & KPI Dashboards | Google Sheets API | REST APIs | Webhooks
Testing & Tools: RSpec | Cucumber | Postman | Git | Jira | Confluence

WORK EXPERIENCE

ResultStack, Remote | **Senior Lead Engineer** | 10/2018 – Present

- **AI invoice intelligence (auto dealer group):** Led a pipeline that watches email for VINs, logs into OEM dealer portals such as Kia with Playwright, retrieves vehicle invoices, and extracts data with Claude into Google Sheets; kept LLM costs low by preprocessing server-side and sending Claude only raw invoice text.
- **AI invoice extraction (property management):** Built an Azure Logic Apps and Claude pipeline that monitors an accounts-payable Outlook inbox and extracts vendor, amount, dates, and invoice number from PDF and image invoices, with per-step error tracking, rate-limit-safe processing, a manual-upload UI, and a kill switch.
- **LLM platform build-out:** Built the integration and reliability layer for an LLM-powered tenant-messaging platform: an IntegrationAdapter base class, shared webhook handler, consolidated utilities, health checks, Sentry logging, tracing, rate limiting with backoff, ORM and integration tests, and a refactored, testable LLM tool layer.
- **Secure exam browser:** Led development of an Electron lockdown browser for an online proctoring company, replacing a multi-install plugin and script setup with one app: process monitoring, VM and remote-control detection, screen-capture blocking, OS lockdown, and webcam streaming.
- **Self-serve kiosk proof of concept:** Built a self-serve ordering kiosk for a quick-service restaurant chain field test on Elo hardware, with interactive menu, cart, register and printer integration, and transaction batching to a data warehouse for market research.

Orbweaver Inc, Bethlehem, PA | **Software Engineer** | 01/2016 – 04/2019 *(concurrent with ResultStack 10/2018 – 04/2019 during transition)*

- **High-volume APIs:** Managed and optimized Ruby APIs serving more than 10 million requests per day.
- **Frontend modernization:** Migrated AngularJS applications to Angular 2+ and TypeScript, improving maintainability and long-term scalability.
- **Delivery and quality:** Introduced Docker, AWS Lambda, and CI pipelines, and built RSpec and Cucumber test automation that reduced production defects.

Trifecta Technologies, Hybrid | **Software Engineer** | 01/2009 – 11/2015

- **Enterprise client delivery:** Designed and built Java, J2EE, Spring, and Hibernate applications for clients including Disney, Penske Truck Rental, Varsity, and BrandywineGLOBAL.
- **Disney applications:** Developed the Student Intern Registration (DORMS) and FastPass scheduling applications that supported high-volume customer interactions.

EDUCATION & CERTIFICATIONS

Bachelor of Science, Computer Science, 2015; DeSales University, Center Valley, PA
Certifications: Sun Certified Java Programmer | Microsoft .NET App Development | IBM Certified Solutions Developer
